How to combine comfort and individuality – with ease.

You set your sights high when it comes to your lifestyle. Starting with your home, you like the design to be as comfortable and individual as possible.

Simple aesthetics and plenty of living space create a harmonious atmosphere. Your furniture also reflects your own personal style of living.

You associate well-being with warmth and a cosy feeling. And you are unwilling to compromise when it comes to comfort. In addition to your aesthetic tastes, a healthy and sustainable way of living is also important to you. That is why you are looking for innovative, high-quality and lasting solutions that will help to save energy and reduce costs.

Zehnder Vitalo – a designer radiator that unites all these requirements could not be a better match.

What you can expect from Zehnder Vitalo:

- **Comfort and individuality**
- **Harmonious integration**
- **Hygiene**
- **Innovation**
- **Flexible and diverse application**

Zehnder Vitalo

Rectangle and circle: The design of Zehnder Vitalo in the 'bar' version is composed of two geometric shapes. This enables the designer radiator with, for example, a natural anodised aluminium surface to be integrated perfectly into a more minimalistic setting. One or two towel rails, depending on the height, make sure that your towels are kept cosy and warm.

Simple accommodation of textiles: the chrome towel rail is open on the left-hand side.

Both characteristic and unique with its black polyamide frame.

Zehnder Vitalo

Inspired by nature: The unusual, almost organic shape of Zehnder Vitalo in the 'cut' version adds a distinguishing feature to every modern setting.

Distinctive and practical: One or two cut-outs, depending on the height, help to heat both hand and bath towels.

heat towels.

The striking profile
gives the radiator
its distinctive look.

Extremely slim, extremely light, extremely innovative

Created by the designer duo, King & Miranda, Zehnder Vitalo is available in two different visual designs – with towel rail or cut-out. The combination of innovative construction elements and high-quality materials produces this incredibly slim profile of only 16 mm. The innovative structure of the product ensures a short reaction time, maximum thermal output and ethereal design. Available in a range of colours and in natural anodised aluminium, Zehnder Vitalo can be integrated into practically any modern setting.

More space: light, smooth and puristic with a profile of only 16 mm depth.

Hygienic and easy to clean thanks to its closed surface (certified by the Hygiene Institute of the Ruhrgebiet).

Seamless integration into your living environment: available in a variety of colours and surfaces.

Individuality: two design models emphasise your personality.

Comfort: pleasant radiant heat ensures warm rooms and warm towels.

Fit for the future: suitable for all low temperature systems, heat pumps and condensing boilers.

Variety: available for hot water central heating or electric operation.

Innovative production techniques and a high quality of materials ensure a long service life.

Flexible: suitable for open heating systems (< 80 °C).

'bar' version

Zehnder Vitalo,
'cut' version

Half depth. Full output.

Zehnder Vitalo measures a mere 16 mm in depth and is considerably lighter than a comparable radiator – but still refuses to compromise when it comes to performance. Extremely heat conductive materials transport heat to the entire front, filling the room with pleasant radiant heat. Zehnder Vitalo is compatible with all low temperature systems, heat pumps and condensing boilers – yes, it's fit for the future. With its corrosion-resistant, top-quality materials, Zehnder Vitalo is the ideal choice when durability and sustainability are required.

- 1** Quick-responding, pleasant radiant heat is provided by the **meandering copper pipe** in the hot water version and a heating cable in the electric version.
- 2** The **honeycomb structure made of aluminium** conducts the heat optimally, giving the radiator its stability. Even in big radiators.
- 3** The aluminium honeycomb structure is filled with **graphite**. A technological twist that enables heat to be distributed throughout the entire front of the radiator quickly and evenly. This innovative structure provides lightness and yet great stability.
- 4** The **aluminium front and back** transfer the heat into the room excellently.
- 5** The surrounding **frame of polyamide** protects and seals the entire radiator. Smoothly rounded, it complements the closed, easy-care Zehnder Vitalo form, while at the same time lending it its distinctive profile.

Installation made easy.

The characteristic lightness of Zehnder Vitalo has a positive effect on transport and installation: easy to carry, quick and clean to install. This saves time and makes life easier. It gets even easier with the version that includes the practical Zehnder EasyFit connection box. It conceals the entire connection technology such as supply cables, connectors and the thermostatic valve. Perfect integration of the designer radiator into your surroundings is guaranteed. Folds back to enable cleaning behind the radiator.

A single cast right through to the last detail: even the bracket is the same colour as the radiator. Secure installation included: a screw holds the folding mechanism in place.

Supply cables, connectors and even the thermostatic valve are elegantly concealed inside the Zehnder EasyFit connection box.

Zehnder Vitalo
with Zehnder EasyFit
connection box

Simple to install, vent and clean thanks to flexible pipes: the radiator can simply be folded away from the wall.

After installation only a small part of the adjustment dial of the thermostat valve is visible.

Zehnder Vitalo technical specifications

50 mm centre connection, flow on left, for connection with external fittings to hot water central heating.

Concealed technology with Zehnder EasyFit connection box for hot water central heating.
